An introductory description of the
Global Scaling phenomenon

using a wide range of verbal and written statements by
Dr. Hartmut Müller and other scientists.

Global Scaling is today seen as the basic of a new scientific view of our every day life and the whole universe. This natural phenomenon was discovered in the 1980's by Dr. Hartmut Müller. It shows the distribution of all matter on the lowest energy level of its natural oscillations, where harmony exists. It shows the fractal structure and the fractal evolution of the universe in space and time.

Have a look behind the hidden master plan creating our world every moment of time like the melody of creation. Start to understand how harmony arises in the universe, which makes our world of such a phantastic beauty.

Learn how nature uses its energy in the most effective way; learn about the intelligence and the consciousness in cosmic and microscopic relations – from the biggest to the smallest.

The knowledge of Global Scaling will change our world by helping understanding our real place in the cosmos and developing new technologies in harmony with nature without destroying forces.

Take this knowledge of Global Scaling and use it together with Your special knowledge in every field You are working and living in and find new horizons.

This book was written for everybody who wants to know more about the creating forces of our universe – from the schoolchildren to every adult person.
